Kupzit® - For safe and reliable removal of sulphide off-flavours.

Effective against sulphide off-flavours – careful and gentle on the wine.

Kupzit®

What is Kupzit® ?

Kupzit® is a pure copper citrate applied to a high-quality bentonite, carefully and loosely granulated. Kupzit® contains 2 % copper citrate.

copper citrate

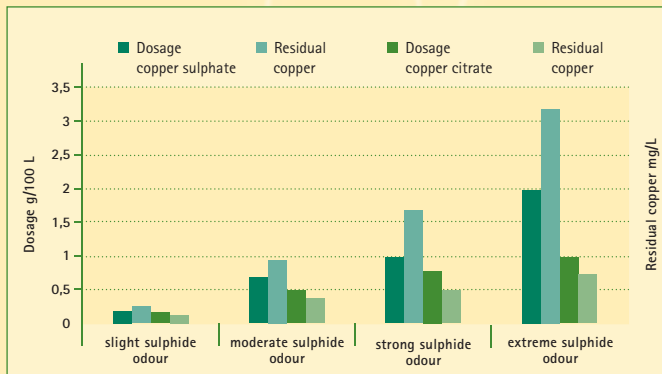

Kupzit® (2 % copper citrate granulated with bentonite)

How does Kupzit® act?

The ionic linkage of copper to citric acid is relatively weak. In wine the released copper ions react quickly and without much excess with the badly smelling and undesirable sulphur compounds and form a fine black precipitate.

Advantages of Kupzit®

Different sulphide off-flavours are reliably and permanently eliminated. The wine aroma is preserved. Residual copper contents in wine are very low, thus blue fining is mostly not required.

Comparison of application of copper sulphate (blue) and copper citrate (green) at wines with different sulphide off-flavour intensity

- Biotic product
- Applicable for all kinds of sulphide off-flavours
- Easy and clean handling
- High reaction specificity
- Permanent effect
- Very little residual copper
- Mostly no blue fining

Targeted pretests with the Kupzit® Test Kit lead to the optimal result. Additions in excess must be avoided. The maximum dosage is 50 g/100 L. The Kupzit® Test Kit is available on the market.
