Craft-Beer - Research gives you an edge!

Erbslöh Geisenheim AG will be on stand 7-219, in hall 7 at Brau Bevale, taking place in Nuremberg from 8 to 10 November 2016. This year in particular the company is addressing the development in craft brewing, which is the current hot topic in the brewing industry. The term “craft brewing” refers to small quantities of beer crafted by small, independent brewers. As there is a 500-year-old tradition of craft brewing in Germany, Erbslöh Geisenheim is taking this opportunity to welcome all beer brewers to its stand. The team of beverage specialists from Geisenheim will be happy to advise you on optimising your brewing process and to suggest economical solutions for individual challenges. Erbslöh Geisenheim covers every stage of the brewing process, from fermentation with pure, dried yeasts, via clarification of beers, stabilisation, filtration or enzymatic solutions, to enzyme-based cleaners for crossflow systems and filter cartridges.

The company’s expanded product portfolio also focuses on technical auxiliaries for producing cider with a special, individual flavour. Erbslöh’s specialists will be happy to chat with you about ways to produce fruity, clear and stable precursors according to vegan recipes.

Erbslöh Geisenheim AG thus offers a full range of beverage technology products and looks forward to exhibiting these to the industry at Brau Bevale 2016.

◆◆◆

Erbslöh Geisenheim AG has been in existence for more than 100 years. Today our company specialises in processing and refining of fruit-based drinks and is a leader in research and development and the manufacture of treatment agents. Even Erbslöh’s move into beverage technology more than 50 years ago was the result of an exceptionally innovative idea. This pioneering spirit is still what drives our family business. The challenge we face is to consistently think of the “future”, both nationally and internationally. From when we were founded until today, we have been governed by the progressive opportunities which innovative products and processes open up for our customers.
