

Erbslöh-Filterschicht P-400

Supporting filter sheet for filtration aids

Product description

Erbslöh filter sheets are manufactured according to the state of the art, using the best raw materials. Erbslöh applies its knowledge of special cellulose fibres to this and pays great attention to selection of high-quality, innovative raw materials. The quality of Erbslöh filter sheets is ensured by comprehensive quality control.

Product and effect

Supporting filter sheets are used in conjunction with filtration aids, such as kieselguhr, perlite and cellulose, and mixed filtration aids for beverage filtration. The supporting sheets act as a carrier for any pre-coating of filtration aid in order to form a filter cake. At the end of filtration, the filter cake can be removed from the surface and the supporting filter sheet can be re-used. Depending on the application, up to 40 cycles can be achieved with one batch of supporting filter sheet.

| Type | Field of application | Separation rate [µm] | Thickness [mm] (+/- 0.3 mm) |
|-------|--|-------------------------|--------------------------------|
| P-400 | Filtration aid supporting filter sheet | -/- | 3.4 |

Storage

Erbslöh supporting filter sheets should be stored in their original packaging, in a dry, odour-free place. The storage room must also be well ventilated. The storage temperature should be between 0 °C and 45 °C. Avoid storing in direct sunlight.
